Education

- 2023-2027 – **B.E. Computer and Systems Engineering, University of Science and Technology POLITEHNICA Bucharest, Faculty of Automatic Control and Computers**
 - **Expected Graduation Date:** June 2027
 - **Relevant Coursework:** Cryptography and Cryptanalysis, Data Structures and Algorithms, C Programming, Operating Systems, OOP (C++ & Java), Algorithm Optimization, Databases, Computer Architecture, Analog & Digital Electronics.
- 2018-2022 – High School Diploma, Mathematics & Informatics, National College Andrei Saguna Brasov
- **Hard Skills:** TCP/IP model, OSI model, TCP, UDP, IPv4, IPv6, Cryptography, Encryption, Authentication, DNS, DHCP, EDR, SIEM, Windows, Linux, C, C++, Github, Java, MATLAB, PowerShell, Arduino, HTML, CSS, JavaScript, Python, SQL.
- **Soft Skills:** Resourcefulness, Problem-solving, Analytical Thinking, Adaptability, Fast Learning, Stress Management, Attention to Detail, Organization, Communication, Curiosity, Teamwork.
- **Digital Skills:** Microsoft Office, Microsoft Excel, Microsoft Word, Microsoft Visio, Microsoft PowerPoint.
- **Languages:** Romanian (Native), **English (C2)**, French (A2)

Experience

Cyber Security Incident Response Intern

BOOKING HOLDINGS | Nov 2024 – Mar 2025

- Participated in real-time security alert investigations, shadowing senior analysts and learning to handle a wide range of threats using tools such as AWS, Azure JoeSandbox, MDATP, CrowdStrike EDR, Darktrace, PhishER, Palo Alto VPN (GlobalProtect) and Cisco Umbrella.
- Analyzed suspicious indicators (links, files, user activity), developing a deeper understanding of threat behavior and networking fundamentals.
- Worked hands-on in fast-changing environments, constantly adapting to new tools, scripts and different types of alerts while improving my troubleshooting skills.

Projects, Courses, Hackathons

- **April 2026 – [Application for Message Encryption and Steganography](#)**

University Project

A **Python** educational app that allows users to encrypt and decrypt messages using **RSA** encryption algorithm, hide and extract steganographic messages using **LSB method**, and combine both techniques to better understand data confidentiality.

- **Jan 2026 – [Application for managing patients testing medications](#)**

University Project

I used **SpringBoot, Java, SQL, HTML and CSS** to create an applications in which the user could log in as an admin or as a patient, and from every interface they would have access to information from the database according to their role. I also implemented functions so the users can manipulate the database from the application.

- **Jun 2025 – Smart Miniature Bicycle Parking System**

University Project

My team and I built a model of an automated vertical bicycle parking system, using a step-by-step motor to rotate the parking belt mechanism and an **Arduino board** for interface and automation.

- **Dec 2024 – ZebraHack**

Web Development Hackathon

Me and my team have won the **second place** for building a website in 8 hours for one of the sponsors' brands focusing on their requirements while using HTML, CSS and JavaScript.

Gained hands-on experience on working in a team to meet a company's requirements with a strict deadline, focusing on functionality as well as on design.

- **Sep 2024 - Cyber Detection & Response Training**

Magis Mundi by BOOKING HOLDINGS

Training that focused on networking concepts such as Protocols, DNS, DHCP, OSI layers, Firewalls, Proxy, PICERL framework etc., types of malware such as Ransomware, Trojans, Worms etc., Phishing and Social Engineering.

- **Nov 2023 – DevFest Bucharest powered by Google**

I attended sessions about AI & Cloud Engineering delivered by Google employees from different places in the world and Google Developers Experts.

I had the chance to talk with a lot of experienced programmers who were working in different subdomains of IT.
